

This map identifies critical habitat for the Eastern ribbonsnake in southwestern Nova Scotia. The map is intended as a companion resource for "The Recovery Strategy for the Eastern Ribbonsnake (Atlantic Population)" developed under the Federal Species at Risk Act (SARA). This map allows landowners, disposition holders and other interested members of the public to view critical habitat at various levels of details and magnification. When interpreting this map, users should keep in mind the critical habitat attributes and the activities likely to destroy these habitats as outlined in the recovery strategy.

For more information refer to the recovery strategy.
